Project registration table

Project summary	
Project title	Shiney Advice and Resource Project (ShARP) – Centre for Warmth
Strategic Area	Fuel Poverty and Energy Affordability
Funding GDN(s) The GDN(s) which register(s) the project	Northern Gas Networks
New/Updated State whether this is a new or updated PEA (indicate as appropriate by removing the option that does not apply)	New
Collaborative VCMA Projects Specific role(s) of GDN(s) participating in a collaborative VCMA Project	N/A
Date of PEA submission This needs to be the initial date of a first project submission	June 2026
Project start and end date	1 st April 2026 – 31 st March 2027 (12 months)
Project location	Shiney Row, Coalfield area of Sunderland
Sectors involved	Distribution Network Operator Gas Distribution Network Charitable Organisation Local Authority
Project contact	
Name	Laura Ratcliffe
Contact details	vcma@northerngas.co.uk
Project partners and third parties involved	
Organisation name	Role
Sharp CFW	Delivery partner
National Energy Foundation (NEF)	To enhance support for vulnerable customers and establish a referral pathway into Better Housing Better Homes (BHBH)
Costs and funding	
Total cost (£k)	£60,000
Total VCMA funding required (£k)	£60,000
Total BAU vulnerability and CO safety activity baseline allowance funding by activity (£k)	£0.00

Problem(s)

NGN's ambition around the strategic theme of Fuel Poverty and Energy Affordability is reflected in their updated GD3 Vulnerability Strategy.

Priority Area 5 from the GD3 Vulnerability Strategy - Continued support for those in financial hardship.

Financial hardship is more widespread therefore affecting more people – more people are vulnerable/need to access support in general (e.g. debt advice). New vulnerabilities are emerging and impacting those people who are “just about managing”. Within this, there are some with greater risks/depth/complexity of vulnerability e.g. greater barriers/challenges to accessing support – knowledge of services/access to services/digital exclusion/language or communication barriers and geographical challenges (e.g. coastal areas)

Northern Gas Networks' Centres for Warmth (CfW) model is designed to provide immediate, short term (localised) crisis support, which aligns primarily to the vision captured in **Priority Area 5** described above. A 'worst first' approach has been adopted, and twenty centres have been established in GD2. Funding in GD3 affords NGN the ability to continue to support these community settings, in order that they can continue and expand upon what they do best, in the heart of their local communities. A Centre for Warmth represents a trusted, safe, local environment in which to engage vulnerable people, who may not otherwise access advice or services of benefit to them.

The Sharp Centre for Warmth is located in a highly deprived area of Sunderland and its continuation into GD3 will allow the centre to build on and expand its current support offer within the local community. The centre provides a welcoming, trusted space that fosters connection, builds strong relationships and strengthens community cohesion, particularly for residents who face multiple barriers to accessing support elsewhere.

Sunderland experiences significant inequality, with pockets of affluence and regeneration that many residents are unable to access, while large areas face high deprivation, poor health outcomes and low educational attainment. Employment is often low paid, insecure or based on zero-hours contracts, limiting financial stability, confidence and overall wellbeing, and contributing to persistent poverty and cost-of-living pressures.

Many households struggle to afford food, fuel, housing and other essentials, with rising living costs, energy prices and inflation pushing more people into hardship. While government support has helped some, working households and older people just above eligibility thresholds continue to struggle, with an estimated 50,000 households receiving means-tested benefits or tax credits and many low- to middle-income families now falling into debt and poverty despite being in work or owning their homes.

Health inequalities are stark, with residents living shorter lives and spending more years in ill health compared to the England average. Chronic financial stress contributes to poor mental health, cardiovascular disease and weakened immune systems, while children living in poverty face increased risks of respiratory illness, long-term lung damage and reduced educational attainment.

Fuel poverty and poor housing conditions remain significant challenges, experiencing higher rates of preventable cold-related deaths and a fuel poverty rate above regional and national averages. Cold, damp and mouldy homes are closely linked to respiratory and cardiovascular disease, poor mental health and rising homelessness pressures, with housing costs taking a disproportionate share of income for low-income households.

Health outcomes related to respiratory and cardiovascular disease are significantly worse than national averages, alongside higher out-of-work benefit claimant rates and rising Universal Credit claims. Low-income working families often face additional barriers to accessing support due to long or unsociable working hours, compounding insecurity.

Food insecurity has increased sharply, with significant rises in food bank usage and demand for food aid driven by low income, debt, high housing costs, ill health and insecure work. Despite a large number of food aid providers across the city, demand continues to rise while donations are falling, and informal food support remains widespread but under-reported, meaning the true scale of food insecurity is likely underestimated.

Scope and objectives

The Sharp, Centre for Warmth will provide integrated, community-based support for residents experiencing poverty/fuel poverty or disproportionate hardship. Its purpose is to address both immediate needs and the underlying factors that contribute to long-term vulnerability, helping individuals build resilience, improve wellbeing, and move towards greater self-sufficiency.

To address the challenges faced by the target community, Sharp Centre for Warmth will provide:

- Provision of a Warm, Safe, Welcoming Space for all
- Dedicated Centre for Warmth Advice Worker to offer advice through a mix of Drop-In sessions, face-to-face workshops, face-to-face 1:1 appointment
- ShARP core team will provide a range of engagement activities in partnership with the Advice Worker

The activities will include:

- Face-to-face benefit and debt advice
- Income maximisation through supporting benefit claims
- Promoting and delivery of “Take Up” campaigns e.g. Pension Credit, Attendance Allowance, Disability Living Allowance etc
- Budgeting advice delivered through a “social kitchen” sourcing and cooking nutritious meals from scratch
- Social Kitchen – shared community mealtimes with social activities
- Bringing in partners/specialist providers to raise awareness on key issues eg Green Doctors, Tyne & Wear Fire and Rescue – Smoke Alarms, CO monitors etc

Overall, this Centre for Warmth will provide a coordinated, holistic response to the complex challenges faced by residents within the local community, ensuring they can access the right support at the right time. An established centre will act as a conduit for vulnerable people, to engage with trusted intermediaries i.e. this cohort may not go elsewhere, nor know how to access services which may benefit them.

Objectives:

The above project scope will achieve the following;

The funding will support the initiation and work programme for Sharp, Centre for Warmth. This project model relies on the provision of VCMA funding, materials and resources to our community centre located in an area of high deprivation, fuel poverty, and carbon monoxide risk. The increased levels of funding, resources and

materials will enable the community centre to ramp up its existing support/offer for customers in very vulnerable situations. The following will be achieved: -

- Increase community awareness of energy efficiency
- Improve the health and wellbeing of residents including anxiety relief
- Reduction in fuel poverty
- Income maximization work to increase household budgets
- CO awareness and advice/education
- Increased awareness and registrations to PSR
- Reduce social isolation

Project design engagement

Targeting vulnerability support:

The cost-of-living crisis has compounded issues around fuel and food poverty, but also around housing costs and other essential items. NGN's ambition is to alleviate as much of this where possible, within our network by providing support to address needs, very specific to our communities.

In 2023 we reviewed **how we categorise vulnerabilities**, as we recognised that our previous 5 broad categories were limiting our understanding of the complexity of need - financial hardship, physical challenges, mental wellbeing, rurality and transient vulnerability. This independent research from various sources, considered:

- Gaps in current categorisation
- Applying evolving best practice thinking
- Determine appropriate level of granularity

As a result of this research, we have expanded our categories to 10 more granular themes of vulnerability that reflect complexity of need. As well as defining additional themes and a more detailed breakdown of vulnerability subcategories for NGN to consider, the bespoke mapping research also considered the proportion of customers across our network. It provided us with insights into which of these themes included the highest proportion of customers across our network, with the themes and subcategories below being most prominent:

1. Physical challenges, inclusive of communication issues, physical space
2. Mental wellbeing
3. Financial hardship
4. Temporary vulnerability – including post hospital recovery and pregnancy / maternity
5. Socio Demographic
6. Household composition
7. Rural Vulnerability
8. Accessibility Including language
9. Medical Dependant on Energy
10. Cultural

This learning has allowed us to understand the impact of NGN's engagement for these groups, identify gaps, and seek to target support towards the relevant customers and communities accordingly. Utilising this data has enabled us to identify the priority areas within which to establish Centres for Warmth. The Bespoke mapping and research were used as the basis for establishing NGN's Centres for Warmth Strategy. The mapping was

used to prioritise the geographical areas to be selected for Centres for Warmth, whereby multiple categories of vulnerability were evident.

Detailed mapping and engagement with Local Infrastructure Organisations (LIO's) enabled us to focus our efforts on the geographical areas with the greatest level of need, with some locations requiring funding for more than one centre. This also enable us to identify existing buildings / venues. This approach proved highly effective, as it allowed for meaningful discussion and collaboration with organisations that have in-depth knowledge of their local communities. Their understanding of the areas they serve, and the specific support required has strengthened our insight, giving us a clearer and more informed understanding of the communities within our network.

Why the project is being funded through the VCMA

This project meets the eligibility criteria, as the project aligns with Northern Gas Networks' Customers in Vulnerable Situations Strategy, as well as their Centres for Warmth Strategy. In both, we have a clear ambition to keep our communities safe, for them to be able to achieve affordable warmth and to support those most in need by helping vulnerable households, not just today, but as we invest in a green energy future. The theme of Fuel Poverty and Energy Affordability clearly aligns with the needs of communities supported by Centres for Warmth. An established centre will act as a conduit for vulnerable people, to engage with trusted intermediaries i.e. this cohort may not go elsewhere, nor know how to access services which may benefit them, therefore the role of each centre is crucial.

This project will support a wide range of vulnerable customers who are living in financial hardship and fuel poverty as well as raising awareness of CO and the PSR.

NGN's Centre for Warmth approach affords an opportunity for partners to pay, retain and upskill centre staff and volunteers to expand on their current service provision. The aim of which is to empower them to provide the range of services listed below. Therefore, being able to help their communities with immediate crisis support, to deal with the significant impacts of food and fuel poverty, as well as other financial hardship.

It will ensure a holistic structured approach, tackling an immediate need to support fuel poor households, within a community setting. Centre users benefit from a combination of services, unique to the individual community.

How VCMA funding complements or supplements BAU activities

The Centres for Warmth model / project will be delivered alongside a BAU vulnerability activity (PSR awareness and education) and CO safety activities (raising awareness / education). However, other activities such as energy advice provision, benefits advice, debt advice and income maximisation discussions, which are wholly VCMA funded, will complement the BAU activities undertaken.

For individual GDN VCMA Projects:

Justification for why the project should not be collaborative

Sharp is a grass roots, community group based in Shiney Row, Sunderland where there is significant deprivation. The needs of this community and the support required are unique to this geographical area. The funding will support the initiation and work programme for a Centre for Warmth. As this project and the Centre for Warmth Strategy focuses on services supporting a localized need, within specific geographical locations, it is not feasible to have this as a collaborative project, albeit the initial model owned by Cadent, has been adopted as good practice by NGN.

The Centre for Warmth project model relies on the provision of VCMA funding, materials and resources to community centres/buildings located in areas of high deprivation, fuel poverty, and carbon monoxide risk. This increased level of funding will enable these centres to ramp up existing support and offer lifelines for customers in very vulnerable situations.

Whilst collaboration for this project is not between GDNs, Centres for Warmth actively collaborate with each other. NGN has 18 established centres who meet on a quarterly basis to discuss good practice, lessons learnt and any successes or challenges each centre is experiencing. This has enabled them to establish their own peer support network within NGN's geographical footprint.

Outcomes, associated actions and success criteria

Sharp CfW and NGN will carry out monthly reporting reviews on measurable outcomes against targets to ensure successful delivery. Quarterly reviews will provide the opportunity for more in-depth analysis and the ability to highlight insights and learnings to share, as well as identify any risks and requirement for any associated actions to mitigate these.

Key outcomes expected from this project:

Outcome	Annual Target
Raising awareness of the PSR	1,500
PSR Registrations	200
Offer information and support on income maximisation through face to face appointments	1,500
Partnership Engagement	100
Energy efficiency advice - maximise take up through partnership work	100
Provision of advice and support to make claims	900
Raise awareness of CO and offer CO alarms where needed	1,500
CO surveys	200
Offer supported self-serve for Benefit Checks	200
Establish wrap around support in the ShARP Centre for Warmth	500

Success Criteria

The success of the project will be evaluated using a combination of quantitative output data and qualitative partner feedback. Delivery against agreed targets will be monitored through regular reporting from Sharp CfW, with interim reviews conducted at key milestones to ensure progress remains on track.

Success will be demonstrated by:

- Raising awareness of the PSR through targeted marketing and face to face sessions
- PSR Registrations - We will assist individuals with completion of their registrations on a face-to-face basis
- Offering income maximisation advice, such as supporting with applying for benefits
- Dedicated Centre for Warmth Advice Workers will offer a range of bespoke advice to maximise income through take up of benefit entitlement, budgeting, debt advice, negotiating with creditors creating payment plans
- Partnership Engagement - The Centre for Warmth Advice Worker will use the existing 5 Voluntary Community Sector Networks to provide targeted face-to-face CO and Energy Advice awareness sessions to partners across the city to maximise reach of the project
- Energy efficiency advice - maximise take up through partnership work. Introduce the Green Doctor offer and make referrals into that project
- Educating individuals on carbon monoxide (CO) awareness through face-to-face meetings.
- The Centre for Warmth Advice Workers will work with other ShARP Advice Workers to maximise their contacts
- Raising awareness of CO alarms - The Centre for Warmth Advice Workers will work in partnership with the advice team at ShARP to raise awareness of CO monitors and will raise awareness with tenants in private rented accommodation about the landlord's responsibility to provide CO monitors
- Offering supported face-to-face self-serve for Benefit Checks. The Centre for Warmth Advice Workers will support and teach people on how to carry out their own benefit checks using the free resources in the ShARP Digital Hub
- Establishing wrap around support in the ShARP Centre for Warmth. The ShARP Centre team will provide a range of wraparound centre-based activities to local people Monday – Friday to identify and address need. Activities will include a social kitchen, community mealtimes, craft and chat activities, Shiney Marras Men's Group, family activities and school holiday family cooking etc

Potential for new learning

Feedback will be invited from partners and insights from monthly and quarterly reports will also feed into any lessons learnt. Learning will also be gathered through a specific Centres for Warmth networking call with all Centres for Warmth partners. Learning will be further disseminated through quarterly Customers in Vulnerable Situations Workshops and associated reports and other engagement channels such as through VCMA collaboration groups. Learning will also be shared with other utilities on Infrastructure North and Utilities Together meetings. Learning can also be shared at open days, Partner Networking Calls, annual reports and the annual VCMA showcase event. Learning from projects can also be shared at NEA's annual conference.

New learning will be captured as the project evolves though collaboration with DNO colleagues around Centres for Future Warmth / Centres of Resilience. The ambition from NGN's perspective is for the Centres for Warmth to become Inclusive Hubs; to incorporate digital inclusion provision however, this idea is still in its infancy.

Aligning with and supporting wider vulnerability approaches

The 3% allowance for collaboration in GD3 will be utilised as follows: -

- Collaboration with Northern Powergrid/SP Electricity North-west (DNOs) around energy transition / Net Zero and LCT opportunities – looking to complement activities rather than duplicate
- Collaborative Investment Strategy – DNO and water colleagues
- PSR Strategy
- Centres for Resilience ambition
- Centres for Future Warmth
- Inclusion Hubs
- Working with partners to support child poverty

Monitoring and evaluation

As in GD2, the monitoring of performance and impact will be captured through the following methods:

- Monthly and quarterly reporting, including case studies and lived experiences
- Sharing the work via annual VCMA reports and annual showcase event
- Also included here would be feedback forms from individual project partners around Centres for Warmth – how the project has helped them but also how it has helped NGN / broader industry
- NEF reporting in tandem – referrals to them for CfW and vice versa
- One to one meeting with each CfW project lead
- A further SROI would be carried out again at the end of the project to assess how successful it has been

Scale of VCMA project and SROI calculations, including NPV

Cross industry collaboration resulted in the production of an industry resource for SROI calculations (GDN Rulebook). NGN uses this rulebook to review and assess impact and outcomes, in order to be able to generate the appropriate SROI per project. A forecast for SROI will be initially calculated to understand the impact of social return. A subsequent SROI will be calculated to evaluate the success of the project and compare with the initial forecast.

Social value measurement

Total cost*	£60,000
Total gross present value	£319,419.67
Net Present Value (NPV)	£260,975.16
SROI	£4.47

*Accounting for inflationary factors over the term of the project.

Internal governance and project management evidence

Initial: All Centre for Warmth proposals submitted to Northern Gas Networks are subject to a robust internal review and assurance process to ensure strategic alignment, value for money, and compliance with VCMA eligibility criteria. Each proposal is assessed against the Centres for Warmth Strategy, ensuring it aligns with NGN’s Customers in Vulnerable Situations objectives and delivers meaningful outcomes for households at risk of fuel poverty and vulnerability.

As part of this process, proposals undergo an internal review, which considers strategic fit, delivery approach, outcomes, and governance. Where a proposal meets the required criteria, a Social Return on Investment (SROI) calculation is undertaken in line with NGN’s approved methodology to evidence a positive social impact and value for consumers funding the VCMA programme. Once the internal review and SROI assessment confirm eligibility and value, the project is formally signed off to proceed.

Following approval, the project is managed and overseen by the Centre for Warmth Project Coordinator at NGN. Ongoing delivery is monitored through a structured performance management framework, which includes:

- Submission of quarterly monitoring reports by the partner organisation, detailing activity, outputs, outcomes, and progress against agreed targets.
- Regular one-to-one meetings between NGN and the Centre for Warmth to review delivery, address any challenges, and provide ongoing support and assurance.
- Participation in regular Centre for Warmth network calls, enabling partners to share best practice, learning, and innovative approaches, while supporting continuous improvement across the network.

This approach ensures strong governance, effective delivery oversight, and continuous learning, while maintaining alignment with NGN’s Centre for Warmth Strategy and the wider VCMA objectives of delivering positive and measurable social impact for customers and communities.

Approver (Name and Role)	Date
Eileen Brown, Customer Experience Director	April 2026

Eligibility Criteria

Eligibility Criteria	Description	Project qualifies Yes / No

Positive SROI	Have a positive, or a forecasted positive, Social Return on Investment (SROI) calculated in accordance with a model which the GDNs have developed and submitted to Ofgem including for the gas consumers funding the VCMA Project	Yes
Positive NPV	Have a positive, or a forecasted positive Net Present Value (NPV)	Yes
Support Criteria	Either: <ul style="list-style-type: none"> i. provide support to consumers in Vulnerable Situations and relate to Energy Safeguarding, or ii. provide support for those most at risk of being left behind in the transition to net zero, or iii. provide awareness of, and education on, the dangers of CO beyond the activities funded as business as usual (BAU) through baseline allowances, or iv. reduce the risk of harm caused by CO 	Yes
Defined Outcomes	Have specific, measurable, and time-bound outcomes which align with relevant Consumer Vulnerability Strategy objectives to achieve the requirements set out in paragraph b;	Yes
Beyond Other Funding	Go beyond activities that are funded through other price control mechanism(s), including baseline allowance funding, or required through licence obligations	Yes
Support or Align	Support or align with approaches to vulnerability taken by the wider energy industry, other utilities and/or consumer organisations, and local, national and devolved government, or evidence innovation or a gap in vulnerability support provision;	Yes
No Other External Funding	Not be delivered through other external funding sources directly accessed by a GDN, including through other government (national, devolved or local) funding	Yes
BAU vulnerability and CO safety activities	Where a GDN's BAU vulnerability and CO safety activities are funded through baseline allowances, these are not suitable for funding through the VCMA. The GDN is permitted to use VCMA funds to supplement or complement its BAU activities, however, it must ensure that its reporting provides sufficient evidence to prevent double funding.	Yes

Eligibility criteria for company specific essential gas appliance servicing

Eligibility Criteria	Description	Project qualifies Yes / No or N/A
Servicing must meet the following criteria:	Either: <ul style="list-style-type: none"> i. A GDN has had to isolate and condemn an essential gas appliance following a supply interruption or as part of its emergency service role; or ii. A GDN or its Project Partner has identified an essential gas appliance which has not been serviced in the last 12 months in the owner-occupied home of a customer in a Vulnerable Situation where an occupier of the property suffers from a permanent or temporary health condition¹² that makes them more vulnerable to health risks associated with cold homes; or iii. A GDN or its Project Partner has identified an essential gas appliance which has not been serviced in the last 12 months in a tenant-occupied home of a customer in a Vulnerable Situation where it is the tenant’s responsibility to maintain the essential gas appliance, where an occupier of the property suffers from a permanent or temporary health condition that makes them more vulnerable to health risks associated with cold homes 	N/A
Affordability	The household cannot afford to service the essential gas appliance, as assessed against the affordability criteria set out in the VCMA governance document	N/A
Funding	Sufficient funding is not available from other sources (including a social or private landlord and national, devolved, or local government funding) to fund the essential gas appliance servicing	N/A

Eligibility criteria for company specific essential gas appliance repair and replacement

Eligibility Criteria	Description	Project qualifies Yes / No or N/A
Unsafe pipework and essential gas appliance repair or replacement must meet the following criteria:	Either: <ul style="list-style-type: none"> i. GDN has had to isolate and condemn unsafe pipework or an essential gas appliance following a supply interruption or as part of its emergency service role; or ii. ii. iii. A GDN or its Project Partner has had to condemn unsafe pipework, or an essential gas appliance, following an essential gas appliance service (as described in 3.19 of the VCMA governance document) 	N/A
Health condition	Either: <ul style="list-style-type: none"> i. The occupier of the property suffers from a permanent or temporary health condition that makes them more vulnerable to health risks associated with cold homes and has a household income of £31,000 or below in 2025/26 prices, adjusted for inflation using Consumer Price Index with Housing costs (CPIH) 13, or ii. the household cannot afford to service the essential gas appliance, as assessed against the affordability criteria set out in Appendix 1 of the VCMA governance document 	N/A
Funding	Sufficient funding is not available from other sources (including national, devolved, or local government funding) to fund the unsafe pipework or the essential gas appliance repair or replacement.	N/A
